HERITAGE BITES · PROJECT HANDOFF

Current site screens and owner checklist

A visual record of the public storefront, followed by the confirmations and launch details needed from Kemorego.

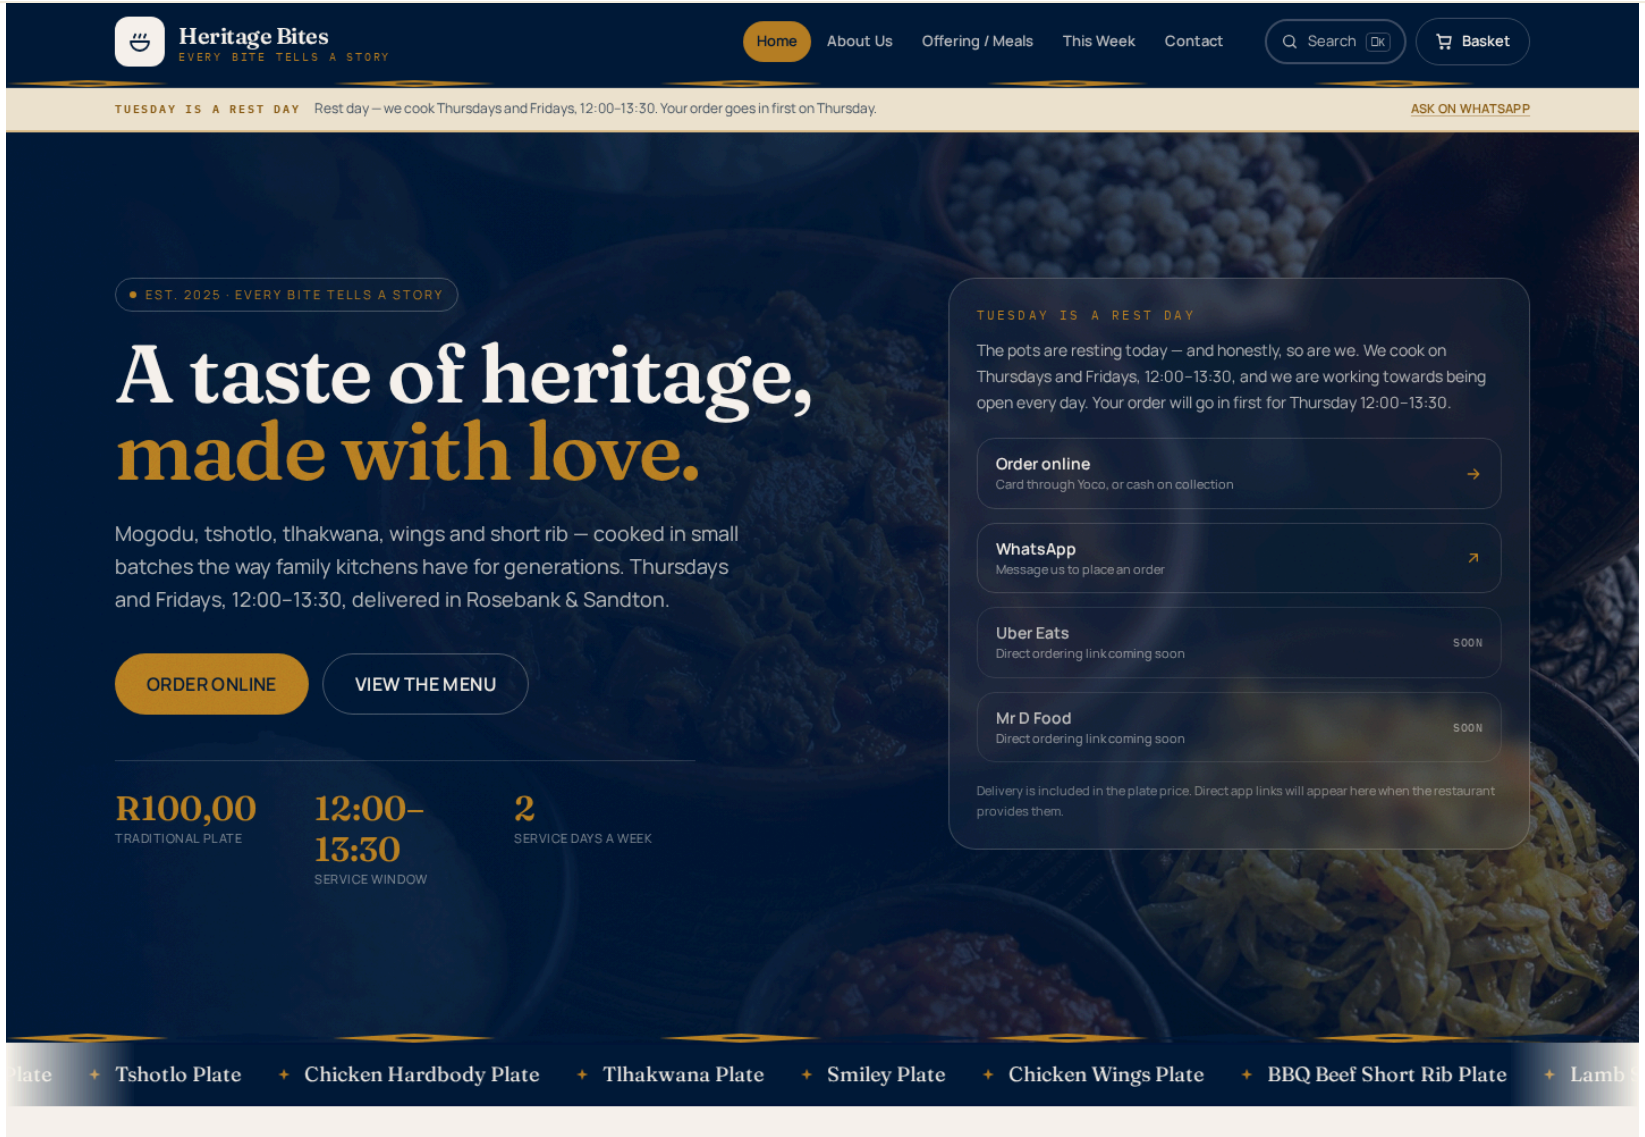

The customer flow works in tests. Background order-email alerts are built but await Gmail SMTP setup; the Contact form is not emailed, there is no staff status workflow, and card checkout remains in sandbox mode.

17 public screens · captured 2026-10-27

SCREEN 01 OF 17 · DESKTOP

Home

/

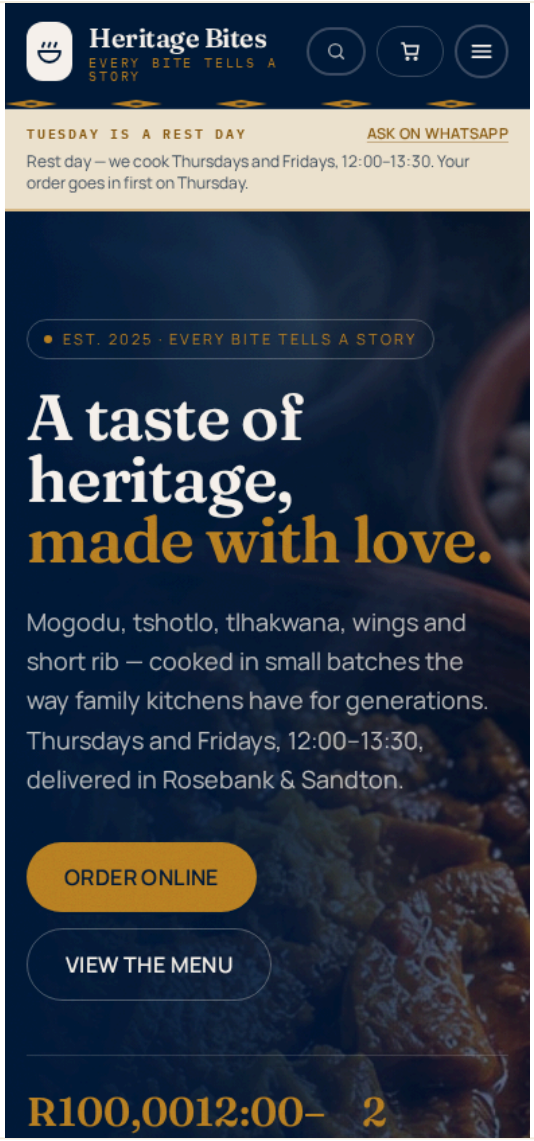

Hero, ordering actions, the Thursday/Friday service window, both plate menus, delivery rules and the loyalty card.

> The moving meal ticker shows names without prices; the public header has no status strip or address.

SCREEN 02 OF 17 · PHONE · 390 PX

Home on a phone

/

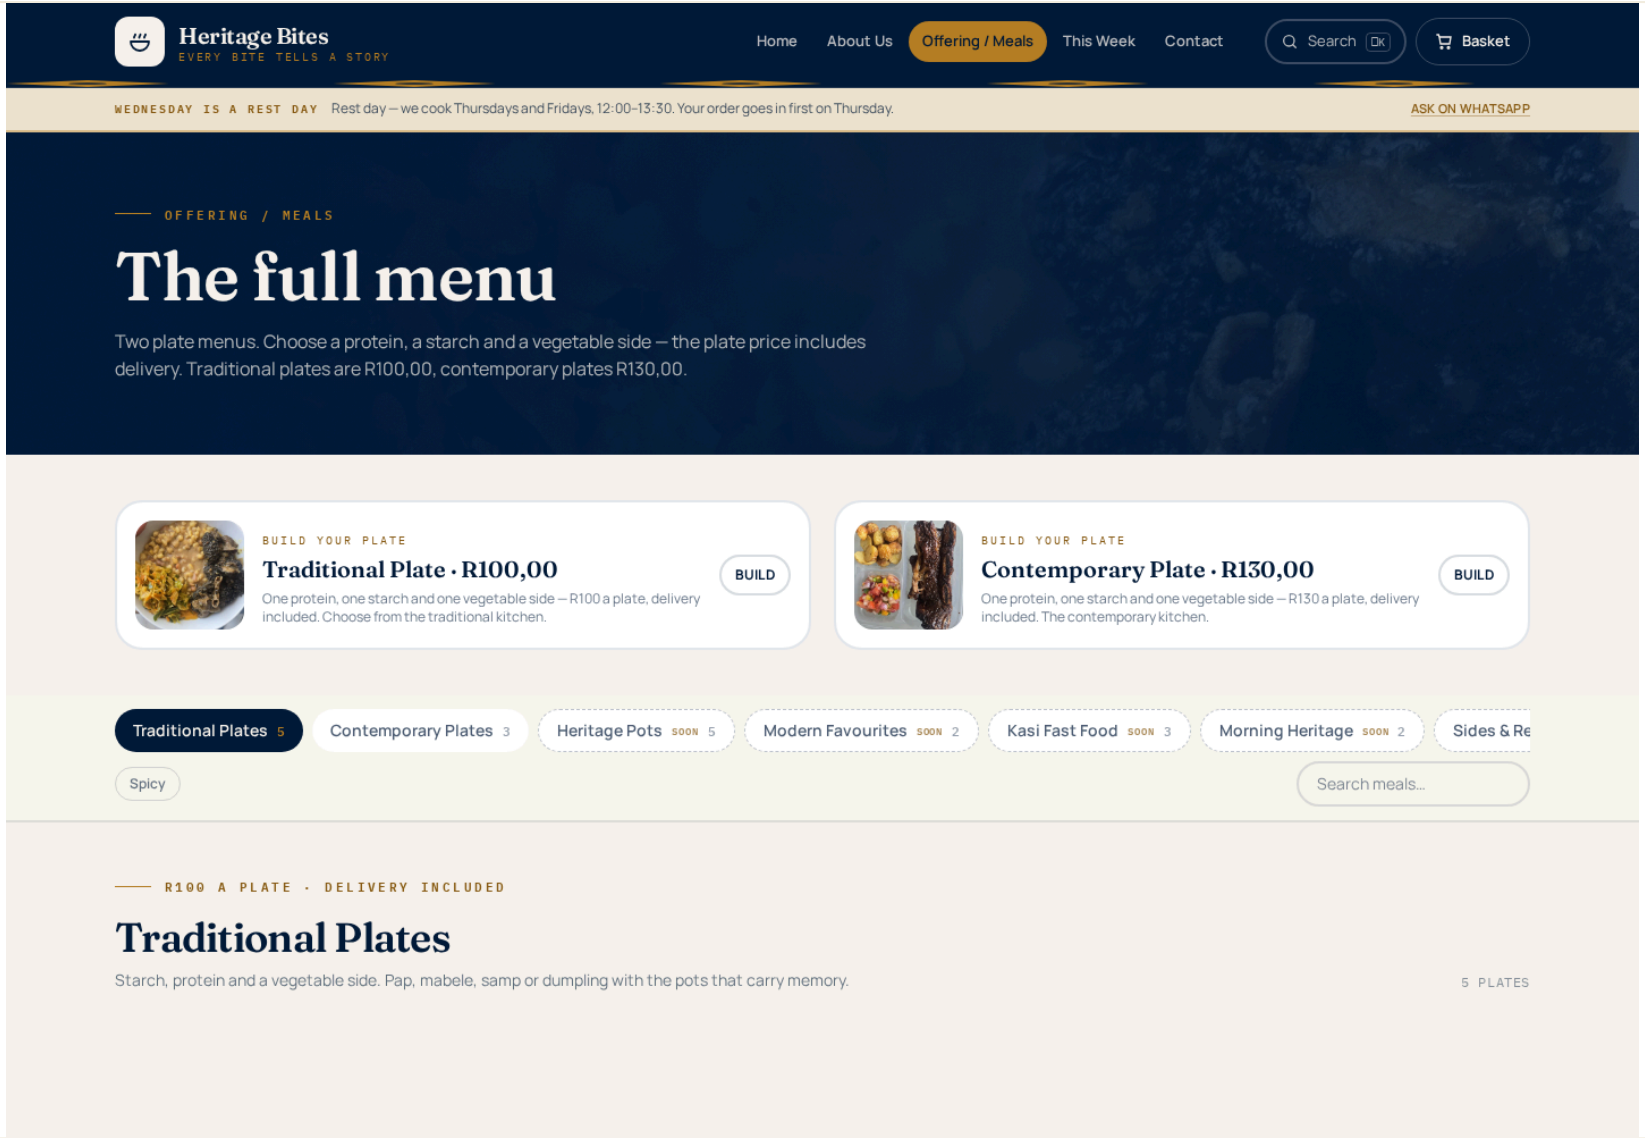

The home page at 390×844, showing the responsive public storefront.

> Navigation collapses, basket remains available, and hero copy reflows for a phone.

SCREEN 03 OF 17 · DESKTOP

Meals

/menu

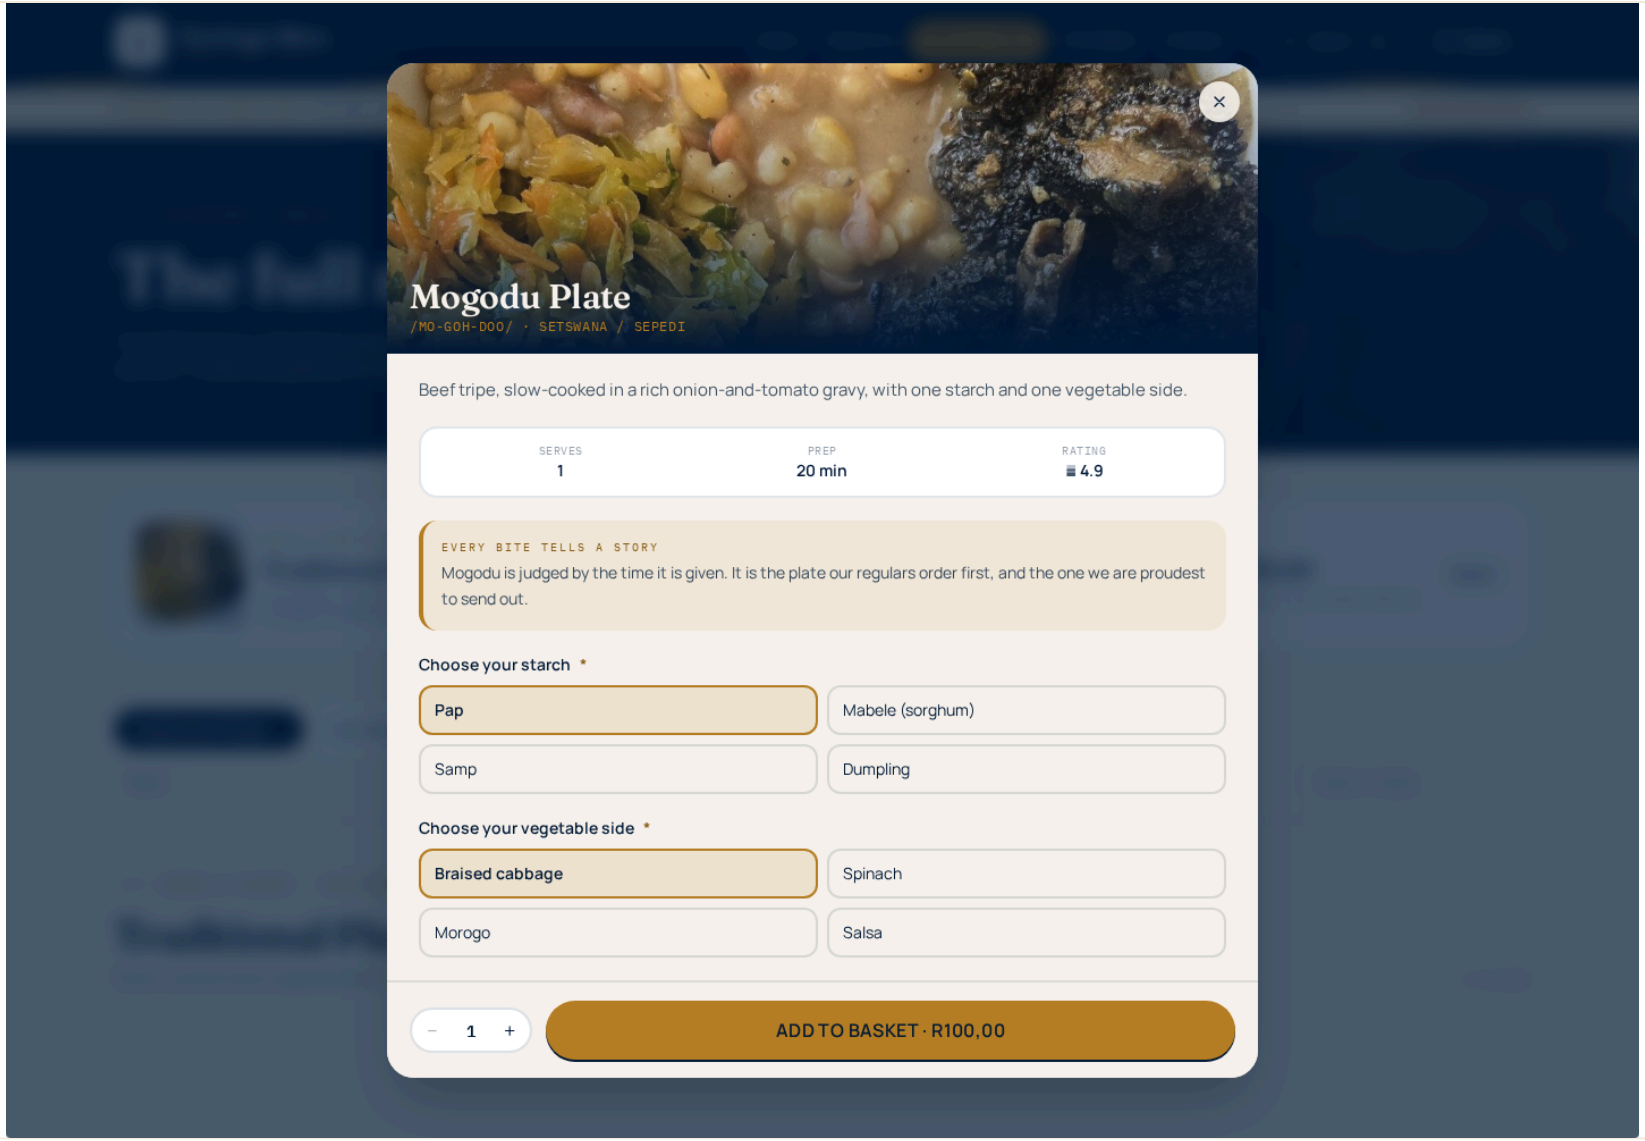

The Traditional and Contemporary plate menus, with meal search, category navigation and both plate builders.

> The sticky category chips highlight the section currently in view.

SCREEN 04 OF 17 · DESKTOP

Dish details

/menu?item=mogodu-plate

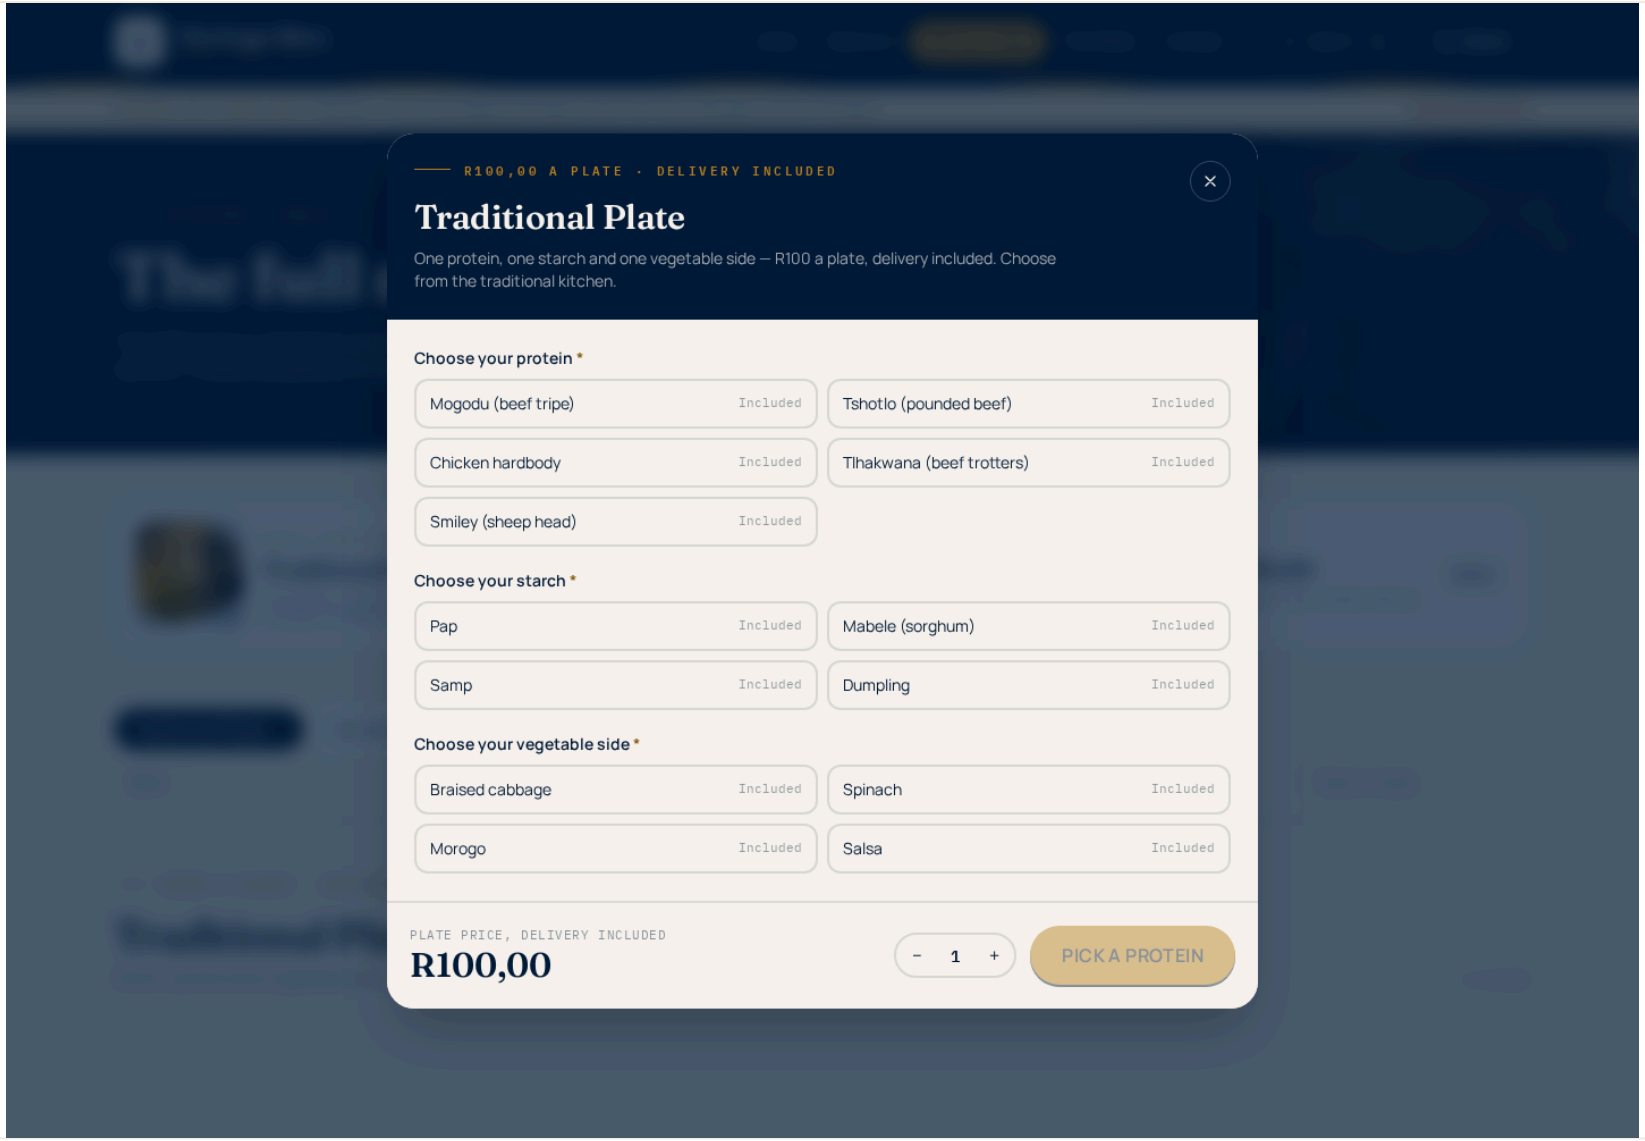

Dish photo, story, starch and vegetable-side choices, all included in the R100 plate price.

> The details use the current menu information without nutrition or unsupported dietary claims.

SCREEN 05 OF 17 · DESKTOP

Build a Traditional Plate

/menu?builder=traditional

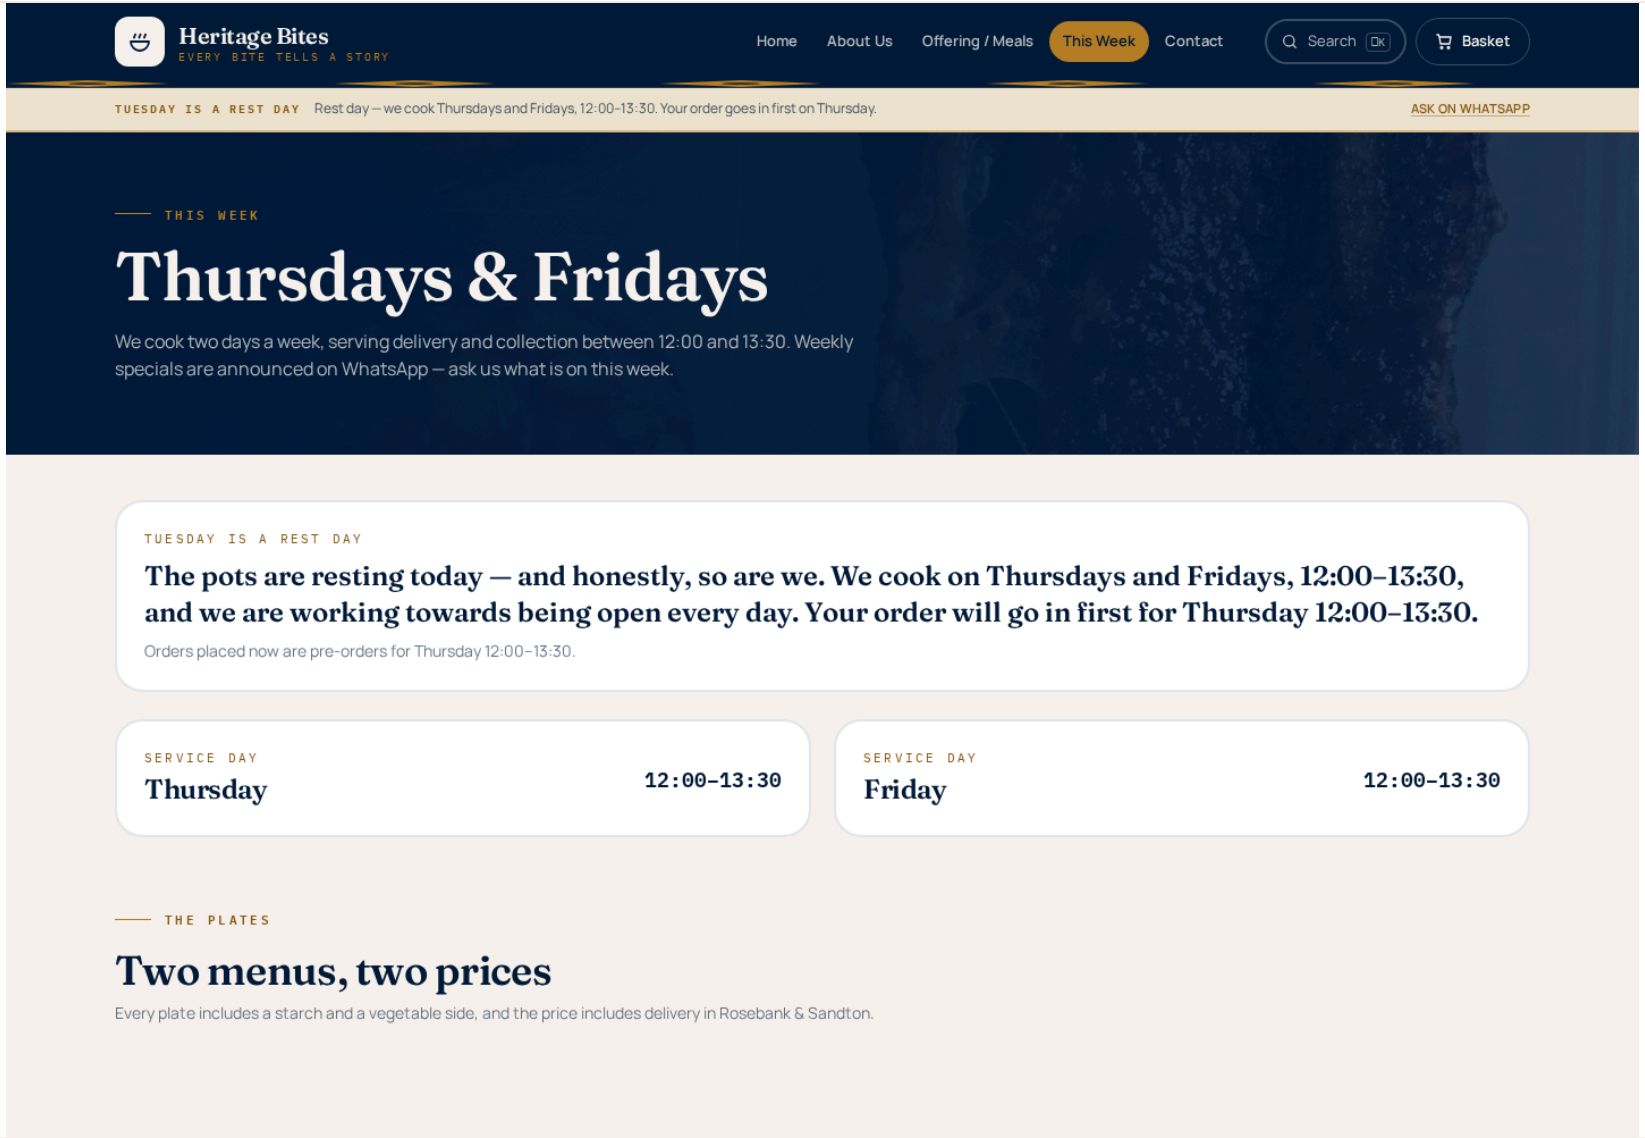

The plate builder lets customers choose a protein, a starch and a vegetable side at the fixed R100 plate price.

> Every component is included in the plate price, and delivery is included in turn.

SCREEN 06 OF 17 · DESKTOP

This week

/specials

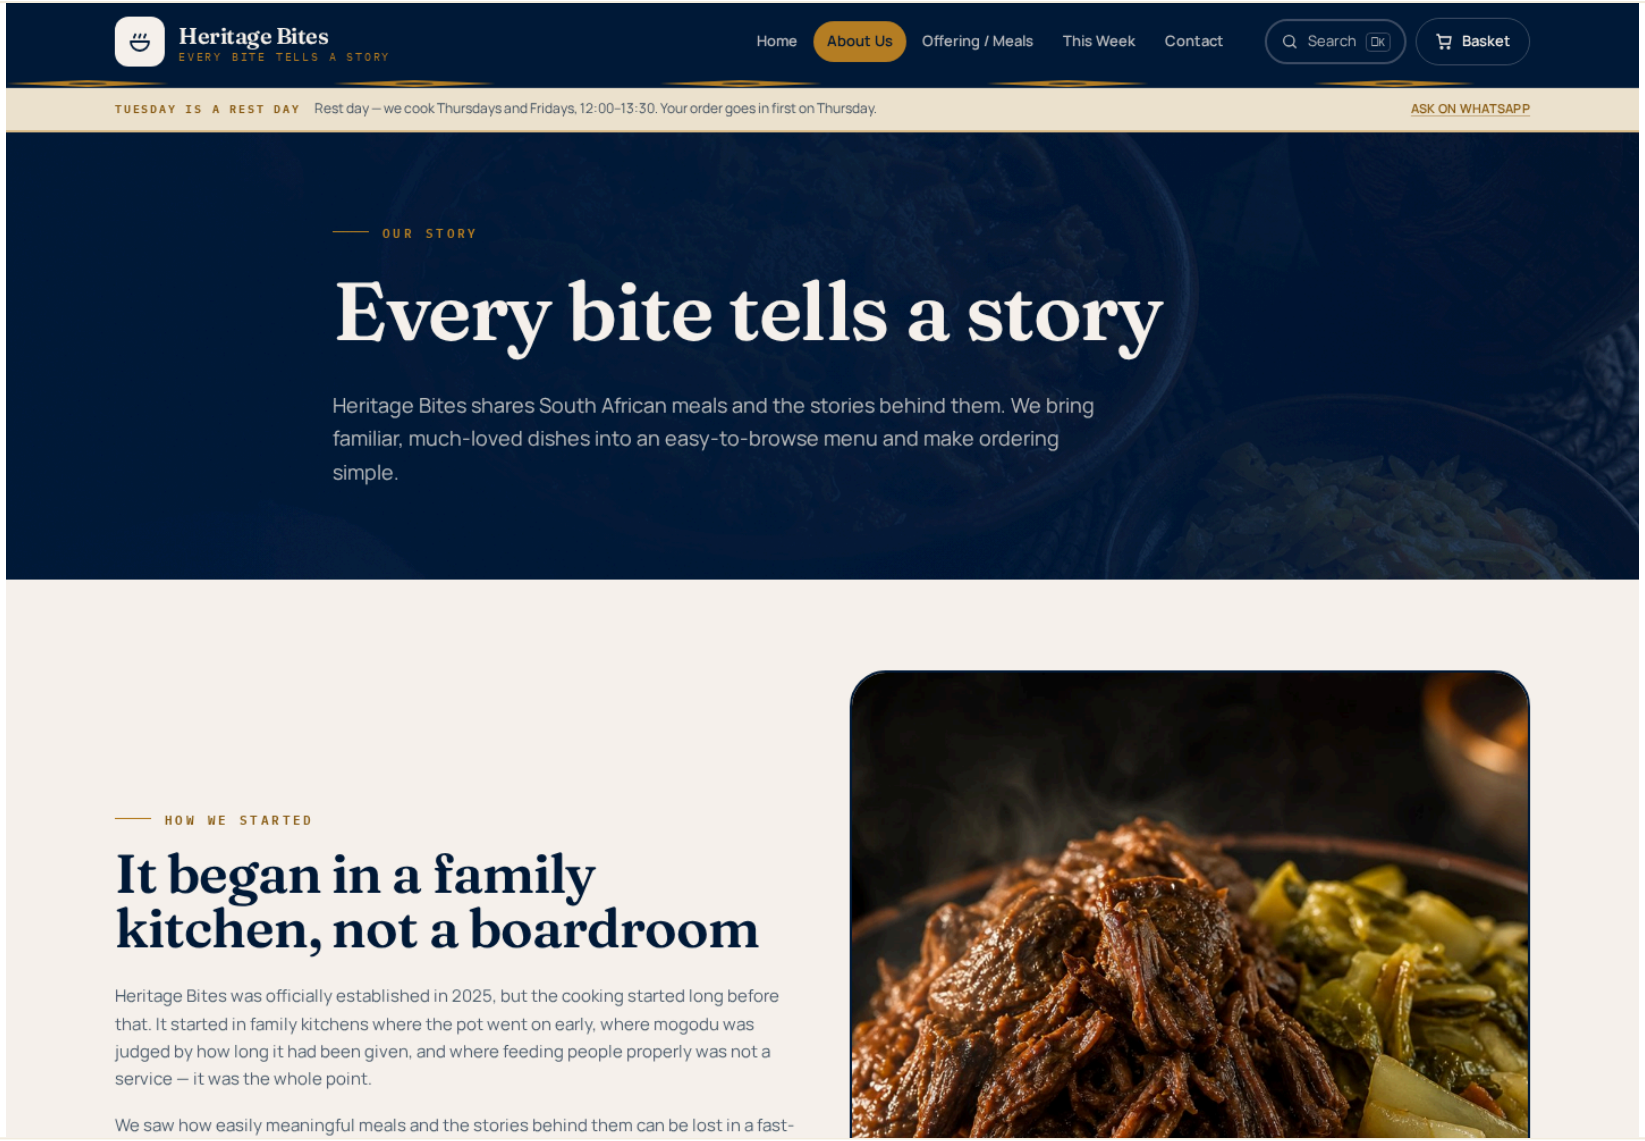

The real service week: Thursday and Friday 12:00–13:30, both plate menus, delivery areas, minimum order and collection point.

> No day-of-week promotions are invented; specials are announced on WhatsApp.

SCREEN 07 OF 17 · DESKTOP

About Us

/about

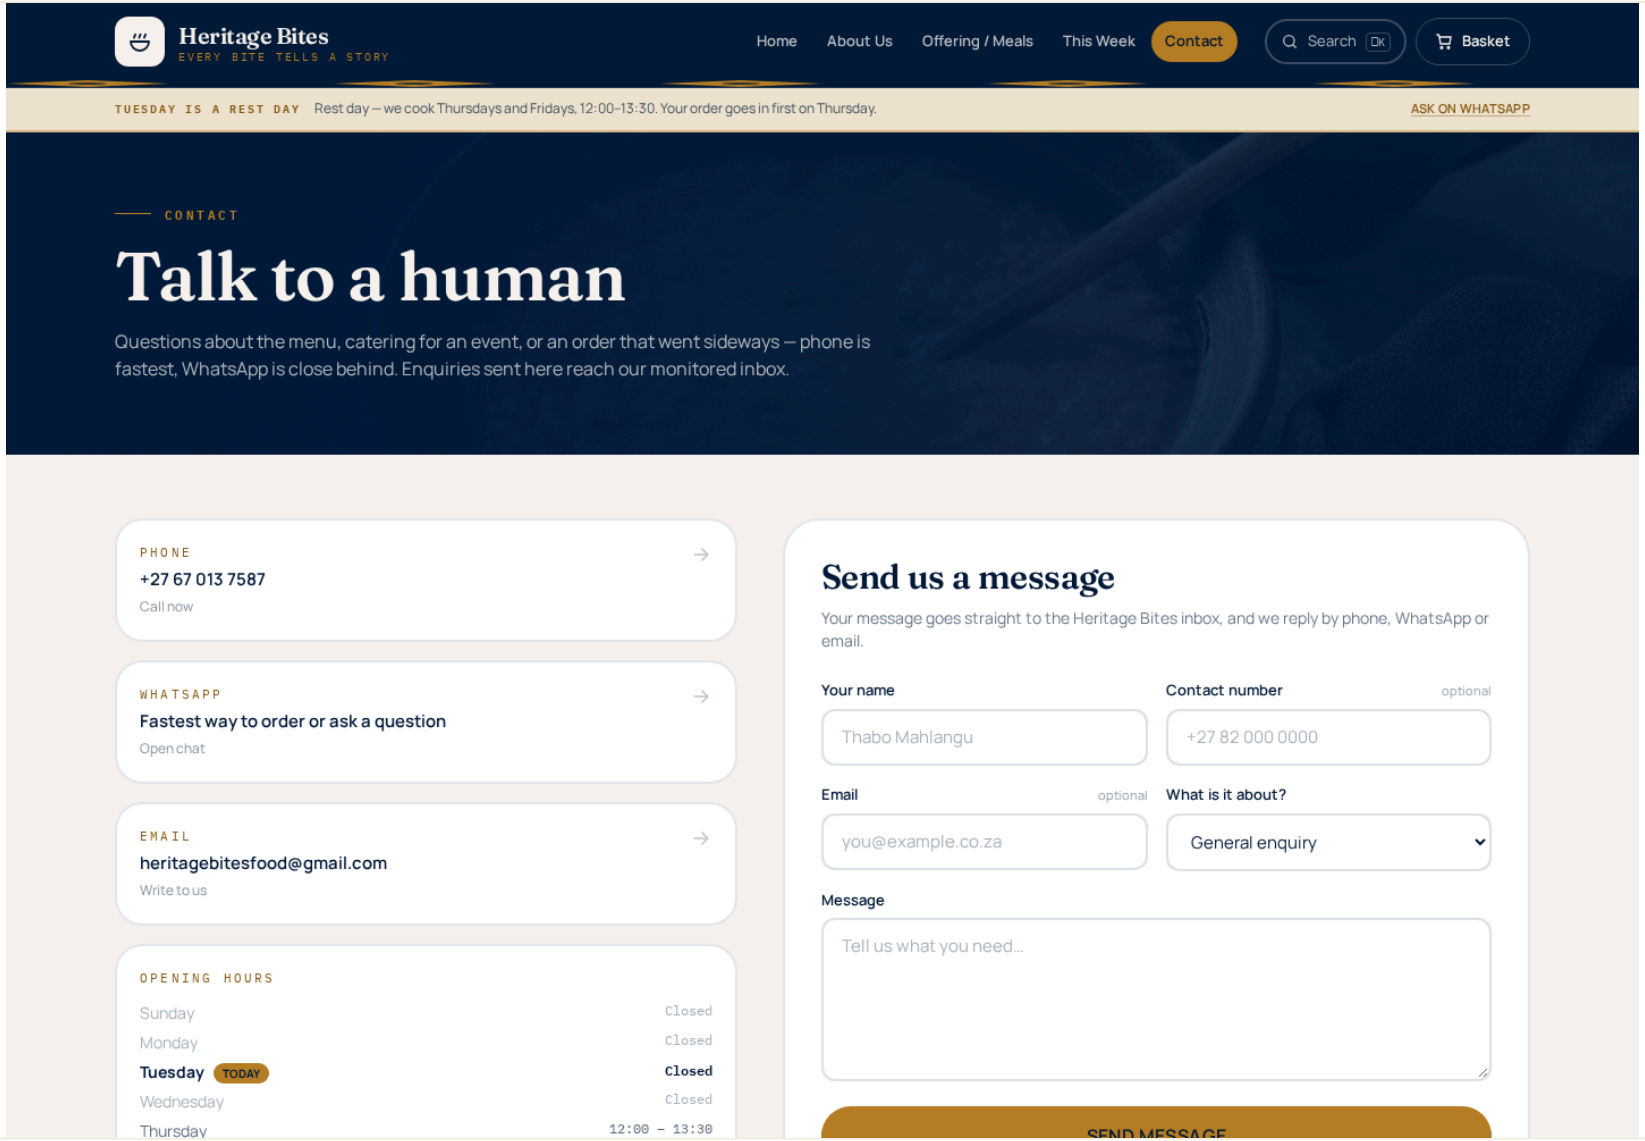

How We Started, Vision, Mission, values and story timeline within About Us.

> Vision, Mission and How We Started are grouped under About Us rather than separate top-level links.

SCREEN 08 OF 17 · DESKTOP

Contact

/contact

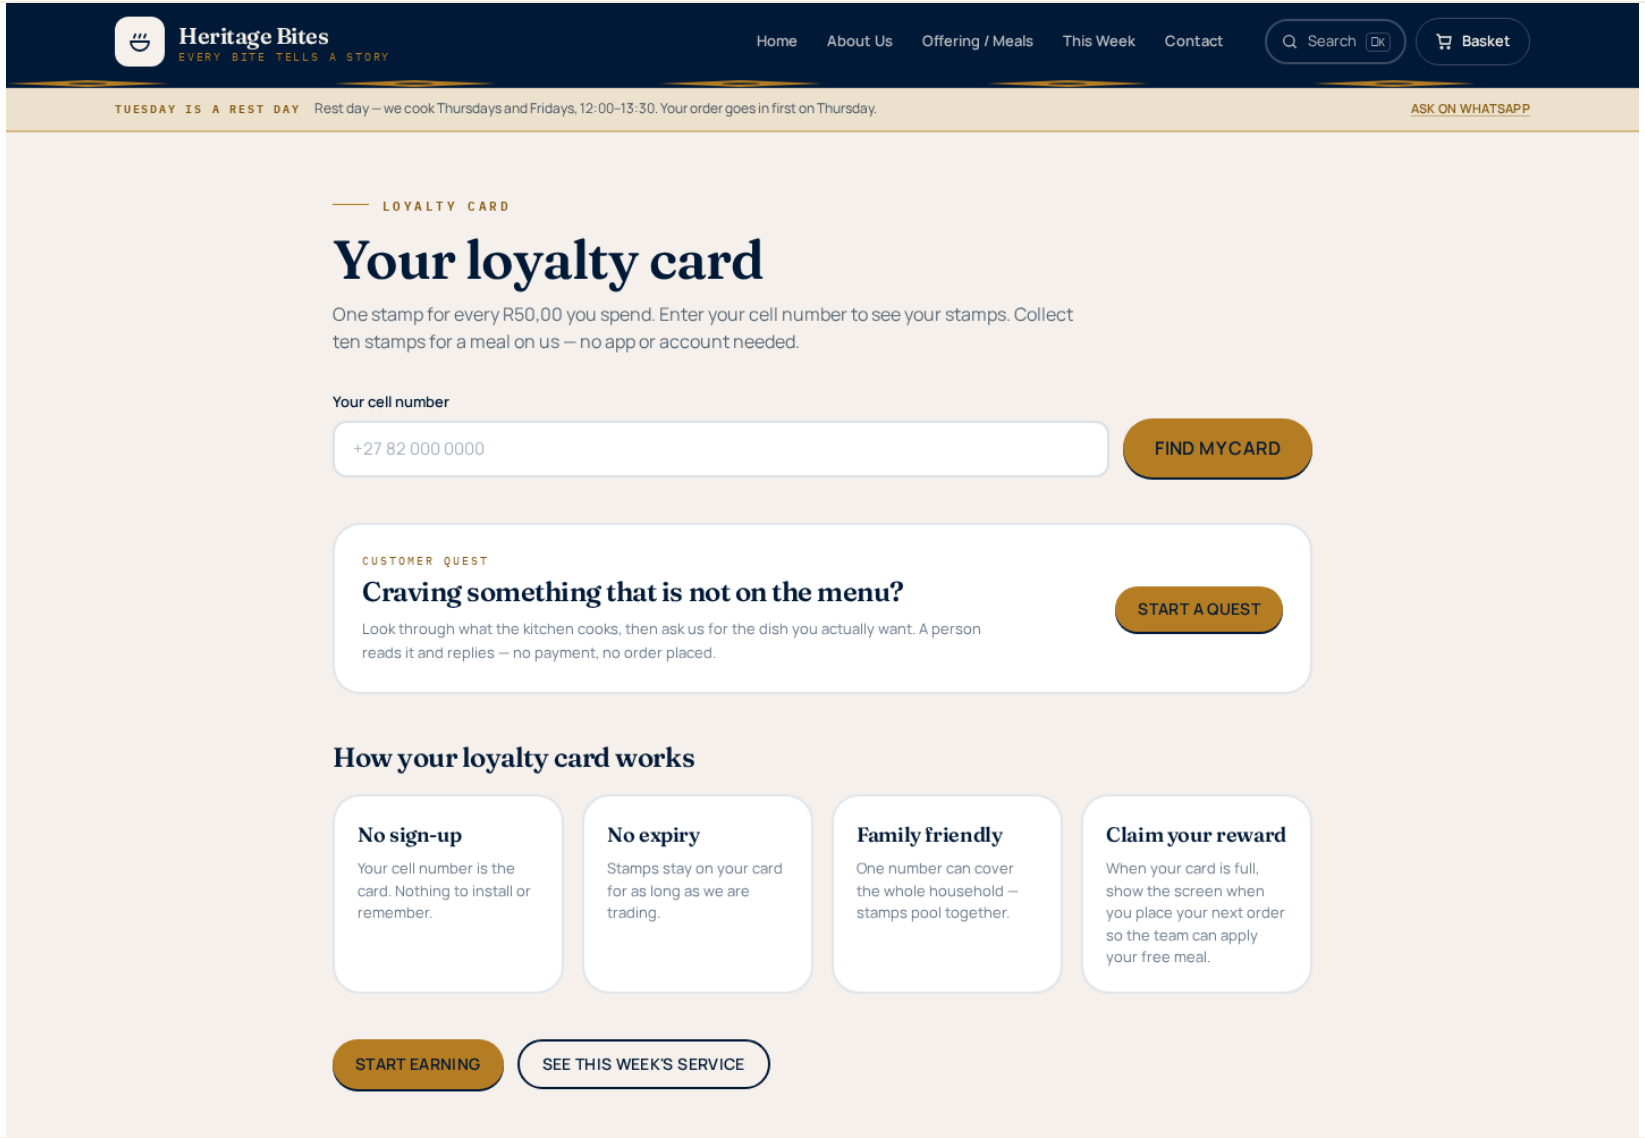

Phone, WhatsApp, email, Thursday/Friday hours, delivery rules and the enquiry form, without a public business address.

> The form delivers to the business inbox; the exact collection point is confirmed by WhatsApp rather than published.

SCREEN 09 OF 17 · DESKTOP

Loyalty card

/passport

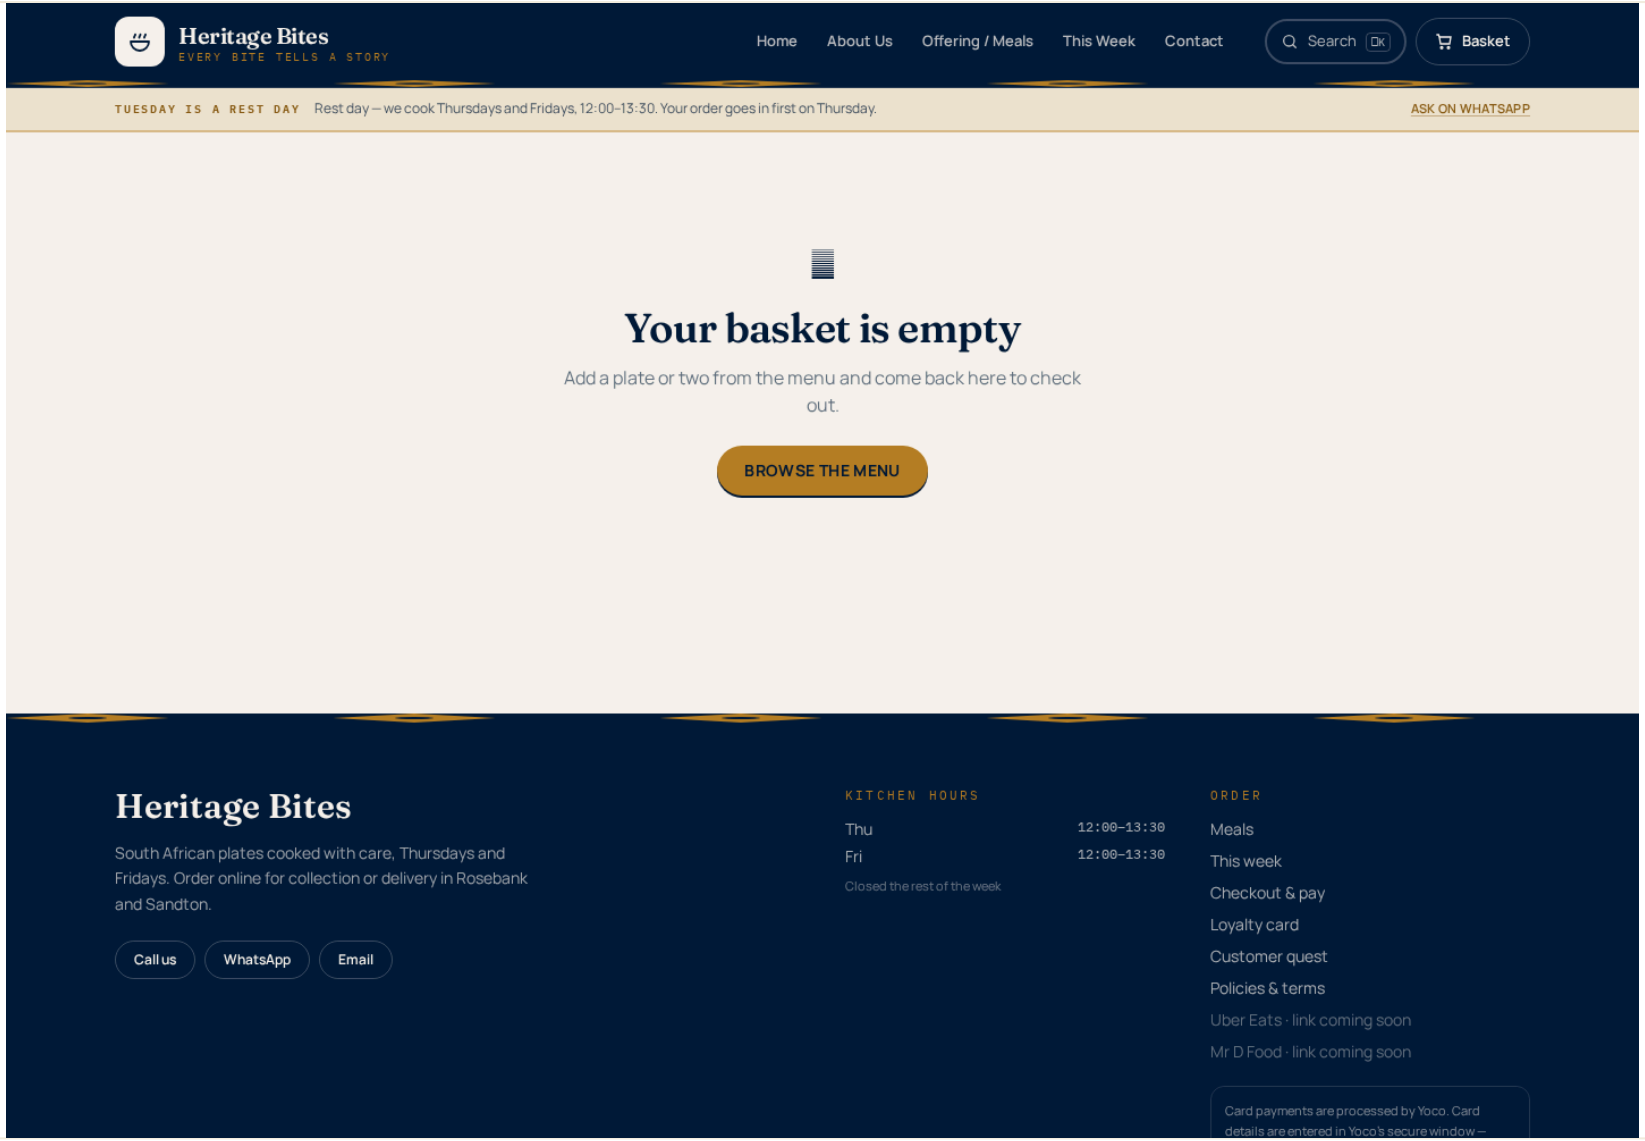

A simple loyalty card lookup by cell number, with stamp balance and reward details.

> The feature is called a loyalty card throughout the public site.

SCREEN 10 OF 17 · DESKTOP

Checkout, empty

/checkout

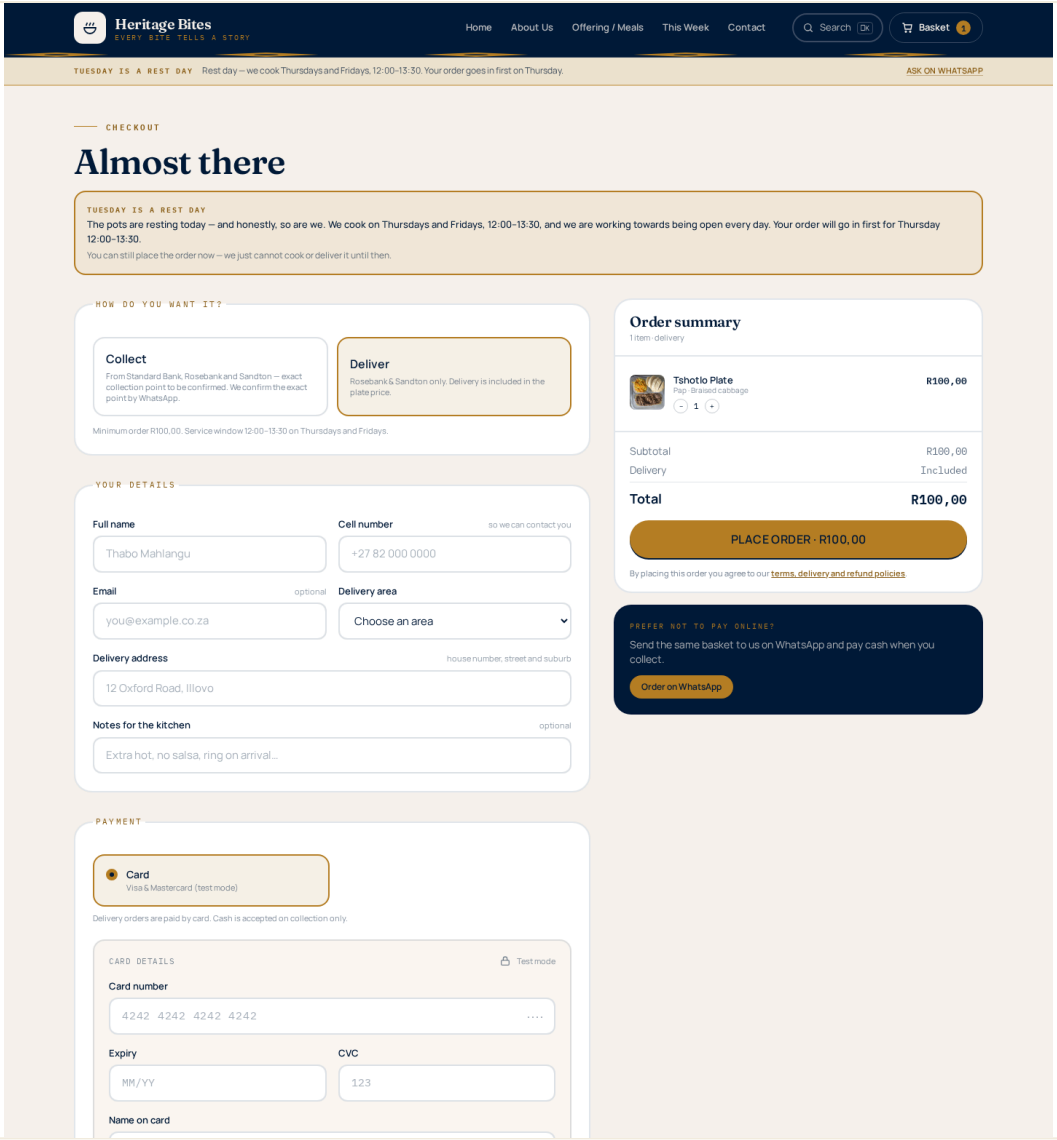

The empty state shown when a customer reaches checkout without items.

> A clear route back to the menu, not a dead end.

SCREEN 11 OF 17 · DESKTOP

Checkout, delivery

/checkout

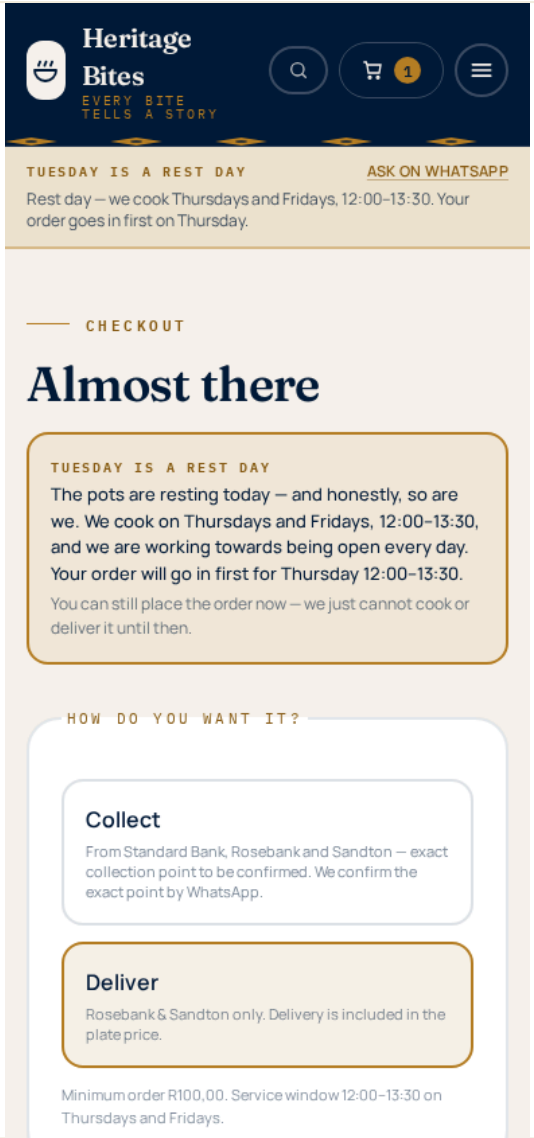

A populated checkout with customer fields, collection selection, order summary and the current payment form.

> Delivery is included in the total, the service window is stated, and updates remain manual by phone or WhatsApp.

SCREEN 12 OF 17 · PHONE · 390 PX

Checkout on a phone

/checkout

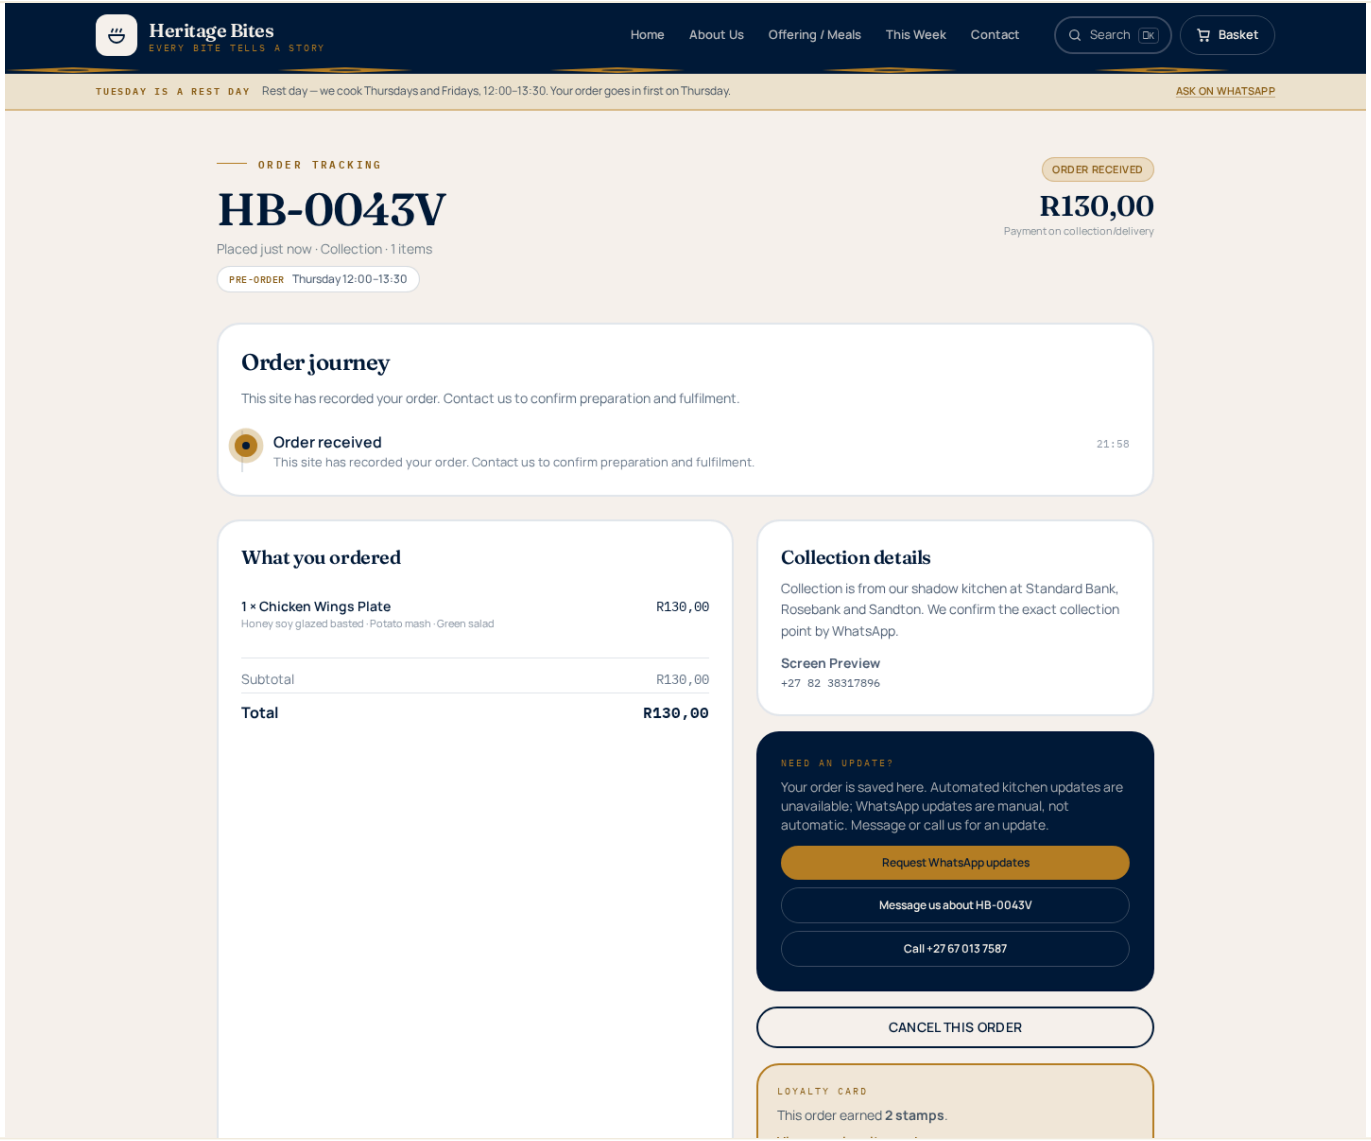

The populated collection checkout rendered at 390×844.

> Fields and totals remain usable in the mobile layout.

SCREEN 13 OF 17 · DESKTOP

Order receipt and details

/order/[secure-link]

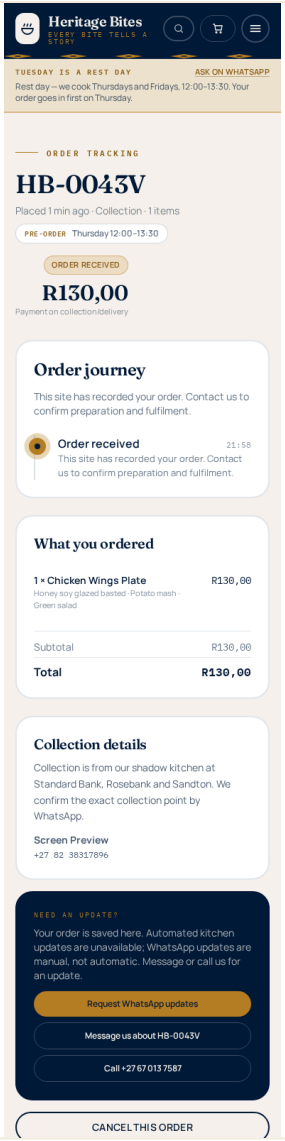

Secure order receipt, item summary, payment and contact details.

> No live progress or automatic messages are claimed; the customer is told to contact the restaurant for a manual update.

SCREEN 14 OF 17 · PHONE · 390 PX

Order receipt on a phone

/order/[secure-link]

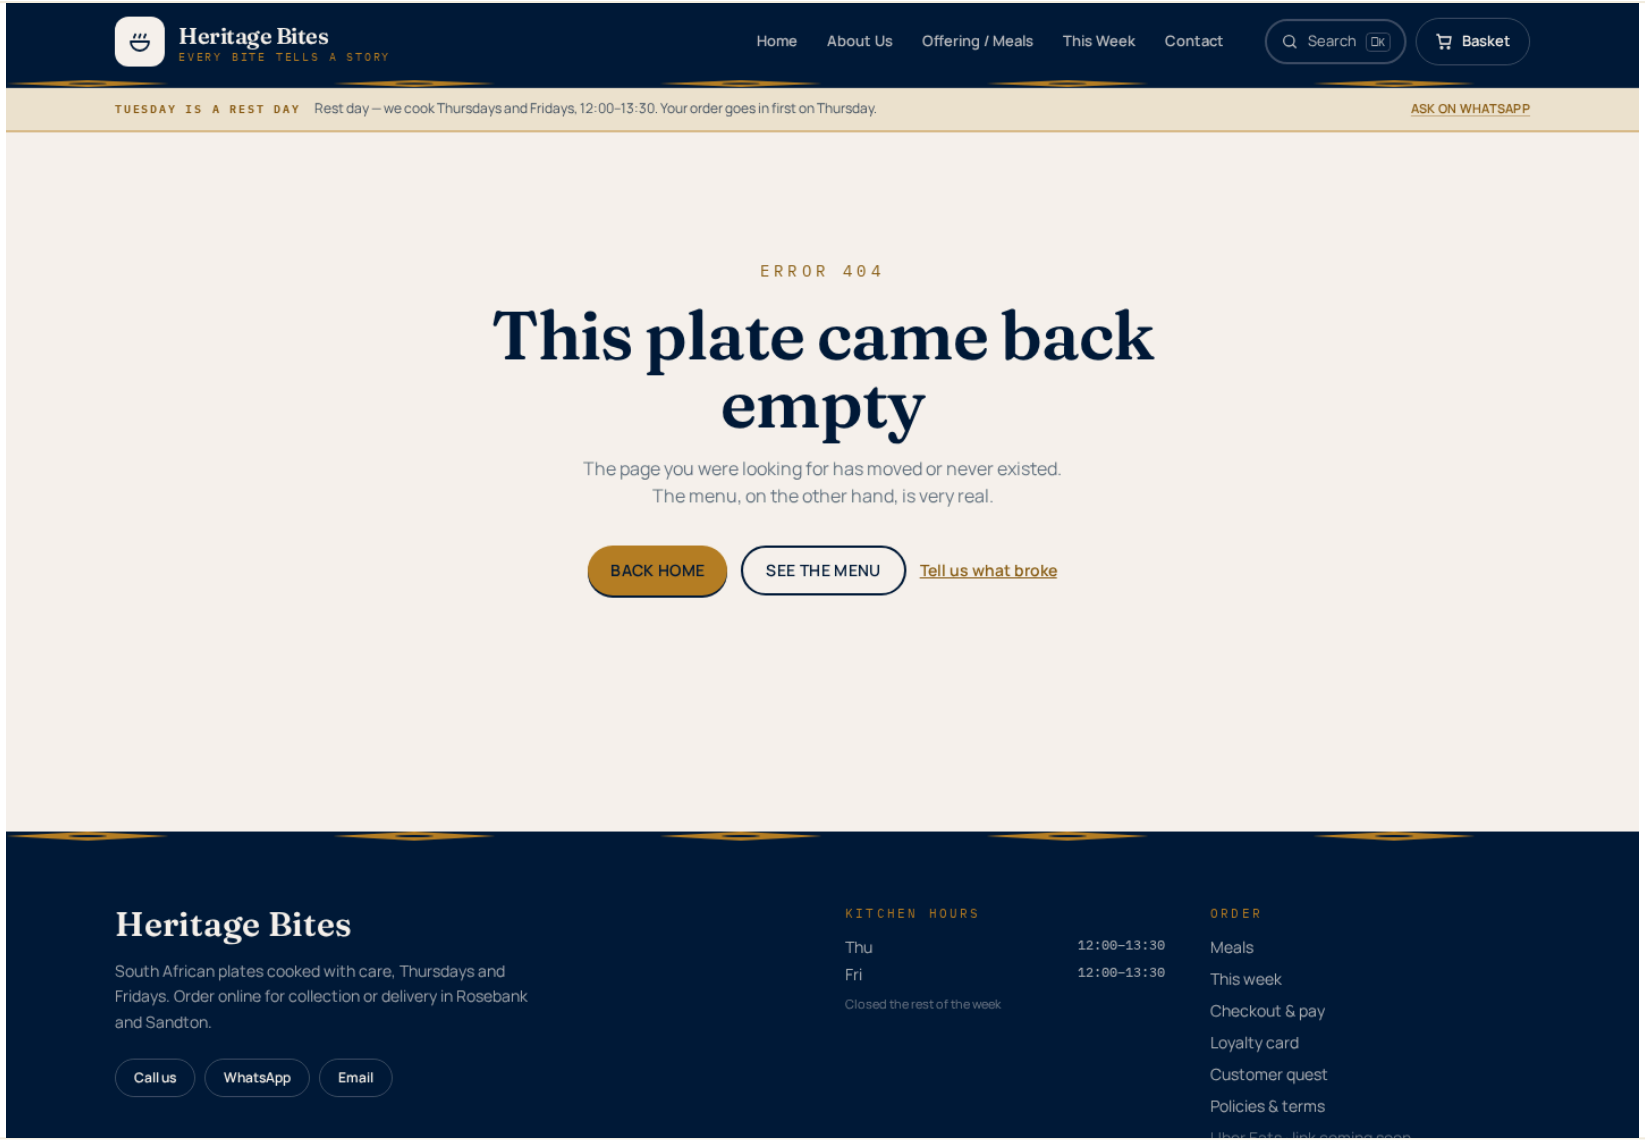

The secure order page at 390px, with details and direct contact actions.

> Order and contact information remains legible at phone width.

SCREEN 15 OF 17 · DESKTOP

Not found

/no-such-page

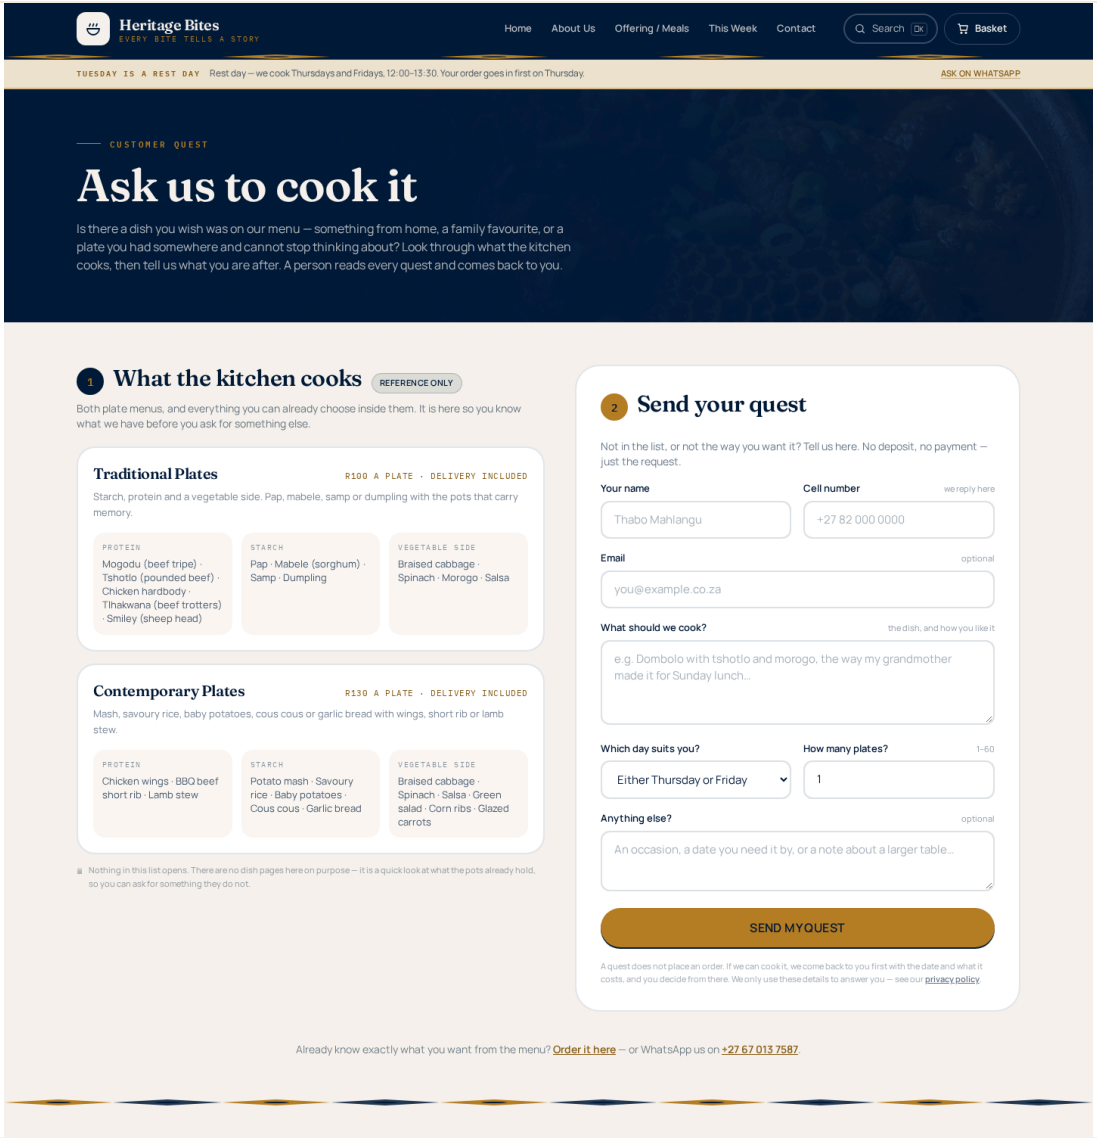

The 404 route with the storefront shell, rather than a browser error page.

> A clear way back to the menu.

SCREEN 16 OF 17 · DESKTOP

Customer quest

/quest

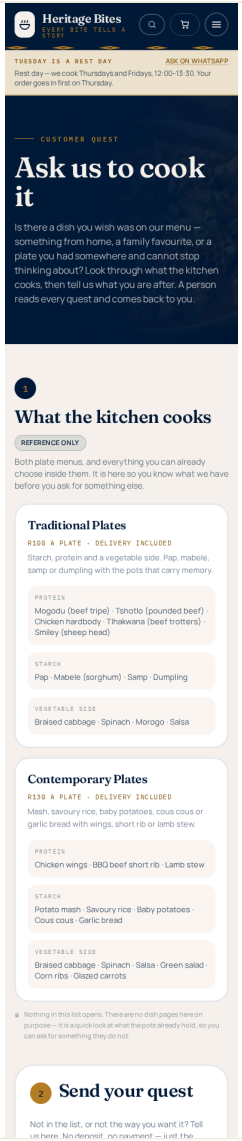

The customer-quest page: both plate menus as a view-only reference, then the request form.

> The reference contains no links, no buttons and no dish photos — nothing in it opens. A submitted quest is a request, not an order.

SCREEN 17 OF 17 · PHONE · 390 PX

Customer quest on a phone

/quest

The quest page at 390px: the view-only reference stacks above the request form.

> The reference stays readable and still opens nothing on a phone.

What I still need from Heritage Bites

Heritage Bites website · outstanding items after the 27 October 2026 answers

Your answers are in and the site has been updated to match them. The full response — what changed, why, and how production card payments work — is in [`regomoditswe-answers-2026-10.md`](regomoditswe-answers-2026-10.md). This page is only the short list of what is still open.

From you (content)

1. **Photos for Tlhakwana and Smiley.** Both plates currently show a "photo coming soon" panel. Please send one photo each, in the same tray-and-plate style as the others. Do not send a photo of a different dish to fill the gap.
2. **Drinks, if you sell them online.** Names and prices. They are not on the site at the moment because no drinks were signed off.
3. **Add-ons, if they exist.** For example an extra starch or an extra side, with the price. The old R18–R65 add-ons were invented, so they were removed rather than guessed.
4. **The exact collection point** at Standard Bank, Rosebank and Sandton. Until then the site says the point is confirmed by WhatsApp.
5. **Uber Eats / Mr D store links**, if you use those platforms. Direct "share store" URLs only — the buttons stay disabled until then.
6. **Confirm the contact-form inbox.** Your Formspree endpoint is wired in; please confirm it delivers to `heritagebitesfood@gmail.com` and who is responsible for replying.

From the account owner (secrets — never send them to me)

1. **Gmail App Password** for `heritagebitesfood@gmail.com`, entered directly in the host's secret settings as `HB_SMTP_PASS`. This is what makes order emails start sending.
2. **Yoco live keys** (`sk_live_…` and `pk_live_…`), entered directly in the host's secret settings. This is what turns the test card form into real card payments.
3. **Hosting decision.** Tell me the host/account (for example Afrihost Cloud/VPS) once it is chosen. I need Node.js 20+, HTTPS and a persistent data folder; there is no database to buy at this stage.

What I will do once those are in place

- Load the two photos and publish them.
- Add drinks and any confirmed add-ons to the menu with their prices.
- Switch order emails and live card payments on, and run a real R100 test order plus a refund.
- Publish the exact collection point.
- Enable the delivery-partner buttons when real store links exist.
